

SUSTAINABILITY AT TROX

TROX PRESENTS ...

THE 2021 SUSTAINABILITY REPORT

Sustainability is probably the buzzword of our time and it is impossible to imagine the media without it. The awareness surrounding sustainable action long ago ceased to be something that was only relevant for private consumers. Companies are also looking more seriously at how their activities are affecting the environment and the importance of a corporate sustainability concept as part of the corporate culture is growing.

THE 2020 SUSTAINABILITY REPORT

Our efforts to promote sustainability are in line with a key value of our corporate policy, as well as with an important mega trend: health. Healthy people, thanks to good, clean air and a healthy environment.

The many uncertainties of a year shaped by the coronavirus, highlight the true importance of this fundamental value and mega trend. This is why we think of sustainability as an opportunity for TROX to stand out as an employer and a solution provider.

- The foundation-owned company group TROX defines sustainability as part of its company DNA. As a long-established company, we at TROX GmbH have placed our trust in long-term goals, efficiency and innovation as well as socially and societally responsible behaviour since 1951. We offer our customers and society components and systems which use the available resources in the best possible way while making a significant contribution to climate protection along their entire value chain. Sustainability is at the core of our how we do business, a growth driver and at the same time part of our responsibility.

- **CLIMATE-NEUTRAL BY 2040**

For us, environmental and social responsibility and profitable growth belong together. That's because continuous improvements make our company all the more viable for the future. It's about more than just saving energy, lowering water consumption and reducing waste. We are orientating our company towards strictly applied sustainability in order to meet our aspiration to be climate-neutral by 2040, thereby making use of the entrepreneurial opportunities available to us for a productive future.

- **17 SUSTAINABLE DEVELOPMENT GOALS**

As part of our sustainability strategy, we are vigorously grappling with the UN's 17 Sustainable Development Goals. For us, these goals are an avowal of our responsibility as a global company group. They include goals which we have always considered important, such as

sustainable economic development, technical innovation, energy efficiency and, most central of all, human well-being.

6 STRATEGIC FIELDS FOR ACTION

We pursue a 360° sustainability approach which comprises 6 defined strategic fields for action. These cover nearly all 17 Sustainable Development Goals. TROX's strategic fields for action are largely focused on achieving these goals. In this way, we want to meet the vast challenges of our times and actively promote sustainable living, working and business.

PRODUCTS

TROX's environmental footprint is largely determined by the products themselves. Our products provide people with optimal air quality and temperature as well as increased safety (fire protection). Here, we believe in long service cycles and energy efficiency.

PRODUCTION

We pay close attention to a careful use of the resources energy and water, waste avoidance and optimal work conditions. We use our TROX production system TPS to improve procedures and sustainability aspects in all 19 production facilities of the TROX GROUP worldwide.

INFRASTRUCTURE

TROX's operational infrastructure is aimed at sustainability. The efficient use of energy and water in buildings reduces CO2 emissions and lowers operating costs. We plan products from the outset to use reusable materials, and recycle wherever possible.

SOCIAL MATTERS

Our employees are the key to the implementation of our business strategy and of our success. Work and health management and a strong training concept for employees sustainably promote commitment and open up potential.

BREEAM CERTIFICATE

BREEAM (British Research Establishment Environmental Assessment Method) is a certification system, which assesses the overall building concept. BREEAM specifies nine main categories on which your building is evaluated. Credits are awarded and weighted for each category. This results in a final score for the building, in ratings from 'Pass' to 'Outstanding'. Overall, the BREEAM certification is a quality label, it encourages you to focus on sustainability in building design and the environmental impact of products in buildings.

TROX can help towards obtaining these credits in different categories by using our products, in combination with other building components. The TROX-products could contribute and impact in six of those nine main categories.

SUSTAINABLE REFERENCE PROJECTS AT TROX

HOHO VIENNA

INTERNATIONAL QUARTER | LONDON

TROX THERM

For the world's second highest wood skyscraper, the focus was on protecting the environment and resources. This is a perfect match for TROX's aspiration to a high level of sustainability and quality. The pressurised air-conditioning system uses high-quality, coordinated components to ensure that emergency exit and rescue routes remain smoke-free in the event of a fire. What makes this solution special is the BUS control unit. It not only saves on materials and cabling costs, but also remains flexible.

INTERNATIONAL QUARTER LONDON

The International Quarter London represents the future of work. This is where new commercial areas, restaurants, cafés and apartments exist alongside 25,000 new, unique workplaces. Together with the architect, TROX developed a customised, completely new air-conditioning solution for the office building: SKYBEAM, a cooling convector with a flexibility that is unique in the world, at encouragingly low operating costs thanks to its high energy efficiency.
